

ATINDRA GHOSH

Barddhaman, India | +91-6295884665 | atindraghosh2017@gmail.com | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY: Around 1 year of hands-on work experience in delivering scalable Full-Stack and AI-powered digital solutions using React.js, JavaScript, Python, Node.js and modern web technologies. Proven ability to build responsive and accessible user interfaces, integrate applications with REST APIs, and optimize performance for seamless customer experiences. Experienced in Agile delivery, code reviews, secure development practices, and cross-functional collaboration with product, business, and engineering teams. Brings strong expertise in GenAI, automation, and intelligent workflow systems, combining engineering discipline with innovation to deliver measurable business impact.

TEHNICAL SKILLS:

Technical Area	Technologies
Programming Languages	Python, JavaScript, Node.js
Generative AI & Agentic AI	LangGraph, RAG Pipelines, LLM Orchestration, Prompt Engineering, Tool Calling, Multi-Agent Systems
Voice AI Technologies	Deepgram, Sarvam AI, STT/TTS, Intent Detection, Conversational AI
Backend Development	Express.js, REST APIs, JWT Authentication
Frontend Development	React.js, HTML5, CSS3, Bootstrap
Databases & Storage	MongoDB, MySQL, Firebase, Vector Databases
AI/ML Concepts	Embeddings, OCR, NLP Basics, Semantic Search
Architecture & Integration	Microservices, Event-Driven Systems, API Integrations
DevOps & Version Control	Git, GitHub, CI/CD Basics

PROFESSIONAL EXPERIENCE:

BECS-Banerjee Electronics and Consultancy Services

Aug'25 – Date

Kolkata(Onsite)

Developer

Responsibilities:

- Built AI-driven web applications integrating Python ML services with React and Node.js backend
- Developed AI-powered applications using Python, Flask, LangChain, and LangGraph to automate business workflows and improve decision-making processes.
- Built RAG (Retrieval-Augmented Generation) pipelines integrating vector search and LLMs to deliver context-aware responses with improved accuracy.
- Developed REST APIs connecting ML inference services with databases for automated client workflows
- Designed intelligent automation pipelines, reducing manual data handling through AI-assisted processing
- Built reusable and modular UI components, reducing development effort and improving code maintainability.
- Implemented state management and API integrations to enable real-time data visualization and seamless user interactions.
- Designed and maintained relational database schemas using SQL and SQLite to support scalable and high-performance applications.
- Developed complex SQL queries, joins, and stored procedures for efficient data retrieval and reporting.
- Participated in designing secure authentication and authorization mechanisms using JWT and role-based access control.
- Developed end-to-end applications using Python, React.js, SQL, and REST APIs, delivering scalable and maintainable solutions.

KEY PROJECTS:

TitanoOS-Robot Controlling Portal

Feb'26-Date

Client Project

Responsibilities:

- Built Full-stack website with team which is going to use as controlling point for a company's robots in Italy and few other European country.
- Developed dynamic user interfaces using React.js, JavaScript (ES6+), HTML5, and CSS3, ensuring smooth interaction for data-heavy enterprise workflows.
- Built and maintained scalable React-based web applications for this products, creating modular and reusable UI components that improved development speed and maintainability.
- Integrated React frontends with REST APIs, enabling real-time data exchange between UI and Robotic systems and backend services.

Stack: Python, React.js, SQLite and other technologies

Agentic Opportunity Radar & Tracker

Aug'25 – Feb'26

Client Project

Responsibilities:

- Built a Lang Graph multi-agent pipeline (Crawler, Extraction, RAG Retrieval, Ranking agents) to auto-discover and rank tenders from heterogeneous web sources
- Worked closely with clients, product stakeholders, and cross-functional teams to understand business requirements, refine user stories, and translate them into actionable engineering tasks.
- **Stack: Lang Graph, Python, RAG, LLM, vector search; delivered real-time opportunity monitoring dashboard**
- Impact: ~70% reduction in manual search effort; ~85% accuracy in opportunity classification

Foundational Voice AI Conversational Agent

Aug'25 – Feb'26

Client Project

Responsibilities:

- Prototyped real-time voice agent: Microphone → Streaming STT (Deepgram/Sarvam) → Intent Classification → LLM Response (GROQ, GPT-12b) → TTS
- Engineered conversation state management; reduced end-to-end conversational latency by ~90%

IMMORTAL 2.0 – Smart Healthcare Platform

Aug'23 – Jun'24

Govt-Aided, IIT KGP Monitored college project

Responsibilities:

- Developed responsive frontend (HTML, CSS, Bootstrap) and MongoDB schemas for rural healthcare delivery
- Integrated patient data capture forms and Python APIs; optimized for low-bandwidth Zigbee environments
- Built responsive and mobile-friendly user interfaces that delivered consistent user experience across desktop, tablet, and mobile devices.
- Created reusable UI patterns and standardized components using Bootstrap and modern CSS practices, improving design consistency across applications.
- Impact: Scaled to thousands of patient records; improved healthcare accessibility in disaster-prone regions

EDUCATION:

B.Tech – Information Technology | Techno International Newtown | 2020–2024 | CGPA: 8.24

12th (Higher Secondary) | Burdwan Municipal High School | 2018–2019 | Percentage: 82.2

10th (Secondary) | Burdwan Municipal High School | 2016–2017 | Percentage: 87.14

Hobbies:

Storytelling || Singing || Cricket || Reading || Philomathy
